According to our (Global Info Research) latest study, the global Stainless Steel Triple Eccentric Butterfly Valve market size was valued at US\$ 400 million in 2024 and is forecast to a readjusted size of USD 513 million by 2031 with a CAGR of 3.6% during review period.

The stainless steel triple eccentric butterfly valve is further improved on the basis of the double eccentric butterfly valve. Its structural feature is that the axis of the valve stem, the center of the butterfly plate, and the center of the body are not in the same position, forming three eccentricities. This special design enables the butterfly plate to quickly detach and adhere to the valve seat during the opening and closing process, reducing friction and wear between the valve plate and the valve seat, thereby improving sealing performance and extending service life.
