## Abstracts

According to our (Global Info Research) latest study, the global Steel Mesh Skeleton Compound Pipe market size was valued at US\$ 400 million in 2024 and is forecast to a readjusted size of USD 567 million by 2031 with a CAGR of 5.0% during review period.

Steel mesh skeleton composite pipe is made of high-strength over plastic steel wire mesh skeleton and thermoplastic polyethylene as raw materials. Among them, steel wire wrapped mesh serves as the skeleton reinforcement of polyethylene plastic pipes, with high-density polyethylene (HDPE) as the matrix. High performance HDPE modified bonding resin is used to tightly connect the steel wire skeleton with the inner and outer high-density polyethylene layers, resulting in excellent composite effect. This type of pipe effectively solves the problem of interface between steel and PE, avoiding the problem of gaps at the interface between metal and plastic caused by temperature stress and internal pressure ring stress during storage and use.
