According to our (Global Info Research) latest study, the global Stepper Motor Electronic Expansion Valve market size was valued at US\$ 662 million in 2024 and is forecast to a readjusted size of USD 919 million by 2031 with a CAGR of 5.2% during review period.

The stepper motor electronic expansion valve is an electronic expansion valve that uses stepper motor drive technology. It is widely used in refrigeration, air conditioning and heat pump systems to control the flow of refrigerant, thereby adjusting the evaporation pressure of the refrigerant to achieve the purpose of accurately controlling the temperature and improving the energy efficiency of the system. Unlike traditional mechanical expansion valves (such as thermal expansion valves, capillary tubes, etc.), the stepper motor electronic expansion valve uses an electronic control system that can accurately control the flow of refrigerant, has a fast response speed and high adjustment accuracy, and is suitable for more complex refrigeration systems or applications that require higher energy-saving performance.
