Abstracts

According to our (Global Info Research) latest study, the global Stepper Motor Linear Actuators market size was valued at US\$ 191 million in 2024 and is forecast to a readjusted size of USD 276 million by 2031 with a CAGR of 5.5% during review period.

A linear actuator is a device that develops a force and a motion through a straight line. A stepper motor-based linear actuator uses a stepping motor as the source of rotary power. Inside the rotor, there's a threaded precision nut instead of a shaft. The shaft is replaced by a lead-screw. As the rotor turns (as in a conventional stepper motor), linear motion is achieved directly through the nut and threaded screw. It makes sense to accomplish the rotary to linear conversion directly inside the motor, as this approach greatly simplifies the design of rotary to linear applications. This allows high resolution and accuracy ideal for use in applications where precision motion is required.

In 2019, Parker Hannifin, Thomson Industries, Haydon Kerk and Physik Instrumente (PI) ranked Top 4 of the revenue share in global market, accounting 52.68% of the total share.

According to the study of classification by type, the External Stepper Motor Linear Actuators segment held main share of the global market with 38.27%, in terms of revenue.

Based on application, the Machinery Automation segment consumed the largest part of Stepper Motor Linear Actuators, accounting for 41.70% of total volume in 2019. North America held a key market revenue share in 2019 with 46.74%.
