Sterile manual disconnect forceps is a manual tool designed for sterile production environments. It is used to safely and reliably disconnect liquid transmission lines under sterile conditions. This tool is usually used in industries with high cleanliness requirements such as biopharmaceuticals, medical devices and laboratories. By accurately cutting the pipeline, it avoids the risk of contamination that may be caused by traditional cutting methods. Sterile manual disconnect forceps meet the standards of GMP (Good Manufacturing Practice) and ISO certification, ensuring that the sterile environment in the tube is not destroyed during the disconnection process, thereby maintaining product quality and experimental accuracy.
