Abstracts

According to our (Global Info Research) latest study, the global Strip Composite Cladding market size was valued at US\$ 813 million in 2025 and is forecast to a readjusted size of US\$ 1300 million by 2032 with a CAGR of 6.8% during review period.

Strip Composite Claddings are non-loadbearing fa?ade or wall covering products manufactured from wood-plastic composites, fibre-reinforced mineral composites, aluminium composite constructions, or other multi-material substrates, typically designed in plank, slat, batten, featheredge, shiplap, or shadow-line formats. A typical system consists of the visible composite facing, the structural substrate or core, profile edges, fixing interfaces, trims, and installation accessories for ventilated fa?ades or dry-mounted wall assemblies. Depending on the material route, the category may include WPC cladding boards, composite timber cladding, fibre cement planks, mineral-based composite fa?ade planks, and selected aluminium composite fa?ade profiles. The functional principle is to provide a durable outer skin that protects the substrate while creating a linear fa?ade rhythm and reducing maintenance compared with traditional timber systems.

In terms of market development opportunities and main driving factors, growth in composite cladding planks is driven by the convergence of four trends: timber-like aesthetics, lower maintenance, industrialized installation, and sustainability positioning. Traditional timber slats remain visually attractive, but their maintenance, weathering, and treatment requirements have pushed many projects toward composite planks, co-extruded WPC boards, mineral-based plank systems, and fire-safer fa?ade alternatives. Public product pages from Fiberdeck, INNOWOOD, NewTechWood, and Silvadec all emphasize durability, low maintenance, weather resistance, and engineered installation

advantages, showing that this market is growing because it rebalances visual appeal and life-cycle practicality.

In terms of market challenges, risks, and restraints, the category suffers from blurred boundaries and highly uneven performance expectations. WPC systems, fibre cement planks, mineral-based fa?ade planks, and aluminium composite profiles do not compete on exactly the same technical basis. Public sources show that Swisspearl and Rockpanel focus strongly on ventilated fa?ades and fire-safe plank alternatives, while VINYLIT emphasizes fa?ade profiles and ArcelorMittal Construction focuses more on sandwich wall systems. As a result, poor market definitions can easily overstate the size of the category by mixing distinct product families into one basket.

Regarding downstream demand trends, the clearest shift is from generic wall boards to systemized linear fa?ade solutions. Designers increasingly want narrow boards, shadow gaps, batten-like rhythms, and wood-grain finishes, while contractors and owners want standardized dimensions, concealed fixing, lower upkeep, and better fire behavior. This is why the market is likely to remain split across WPC/co-extruded systems, mineral/fibre cement plank systems, and selected metal-composite fa?ade formats. The suppliers that win will be those offering not only boards, but also trims, rails, tested fixing details, certifications, and complete fa?ade logic.
