Amalgam separators remove amalgam particles from the wastewater to reduce the amount of amalgam entering the sewage system. Amalgam separators are devices designed to capture amalgam particles from dental office wastewater through sedimentation, Centrifugal, centrifugation, or a combination of these mechanisms. Some separators may also use ion exchange technology to remove mercury from wastewater.

As the dental industry continued to expand and evolve, the demand for amalgam separators was likely to grow in tandem. New dental practices and clinics entering the market were adopting best practices, including proper amalgam waste management.
