Abstracts

According to our (Global Info Research) latest study, the global Super Insulation market size was valued at US\$ 111 million in 2024 and is forecast to a readjusted size of USD 262 million by 2031 with a CAGR of 13.7% during review period.

Super insulation is one of the main items of the spacecraft thermal design, primarily intended to reduce heat loss by thermal radiation. In its basic form, it does not appreciably insulate against other thermal losses such as heat conduction or convection. It is therefore commonly used on satellites and other applications in vacuum where conduction and convection are much less significant and radiation dominates.
