It is non-invasive, highly accurate, has a short treatment period, and can reduce side effects. It is an important tool for the treatment of superficial lesions.

The superficial X-ray therapy system has shown unique value in the field of skin lesion treatment, especially for the treatment of superficial lesions such as skin cancer and keloids. Due to its non-invasiveness and high precision, this system provides an effective treatment option with fewer side effects, especially for those patients who are unable or unwilling to undergo surgery. It is an ideal alternative. With the advancement of technology, the superficial X-ray therapy system is expected to be used in a wider range of skin treatments, further improving the patient's treatment experience and effect.
