A synthetic data generator is an artificial intelligence tool used to generate virtual data sets that simulate the characteristics and distribution of data in the real world but do not involve actual personal or sensitive information. It can generate diverse data, including text, images, audio, video, etc. based on preset rules or existing data models, and is widely used in data science, machine learning, artificial intelligence training, privacy protection, and software development. Synthetic data generators help solve the problems of insufficient data, privacy leakage, and high data annotation costs, while improving the training efficiency and accuracy of models.
