Tabletop Nebulizer is a medical device used to deliver medication in the form of a fine mist that can be inhaled into the lungs. It is typically used to treat respiratory conditions such as asthma, chronic obstructive pulmonary disease (COPD), and other lung diseases.

The tabletop nebulizer consists of a base unit that houses a compressor, a medication cup, and a mouthpiece or mask. The compressor generates compressed air, which is then mixed with the liquid medication in the cup to create the aerosol mist. The mist is inhaled through the mouthpiece or mask, allowing the medication to reach the airways and lungs directly, providing quick relief and better absorption compared to oral medications.
