According to our (Global Info Research) latest study, the global TDR Impedance Test System market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

The TDR impedance test system is the main tool for measuring the characteristic impedance of transmission lines. TDR is mainly composed of three parts: fast edge signal generator, sampling oscilloscope and probe system. TDR sends a pulse or step signal to the transmission path. When the impedance changes in the transmission path, part of the energy will be reflected, and the remaining energy will continue to be transmitted.
