According to our (Global Info Research) latest study, the global Tetrahydrofuran-3-methylamine market size was valued at US\$ 32.93 million in 2025 and is forecast to a readjusted size of US\$ 44.14 million by 2032 with a CAGR of 4.3% during review period.

Tetrahydrofuran-3-methylamine, also known as 3-methylamine tetrahydrofuran, is an organic compound with special structure and properties. Its structure consists of a furan ring and a methylamine group and has stereoisomers. It is a synthetic intermediate of the third-generation nicotinoid insecticide dinotefuran. The product is colorless and transparent with a pungent odor.

Tetrahydrofuran-3-methylamine is a key intermediate of the insecticide dinotefuran. Dinotefuran is widely used in the cultivation of food, cash crops and vegetables due to its high efficacy in preventing and controlling crop diseases and insect pests. With the advancement of agricultural production technology and the improvement of farmers' requirements for crop quality, the market demand for dinotefuran is expected to increase further. The promotion of environmental protection policies has also prompted the pesticide industry to transform towards high-efficiency, low-toxic and environmentally friendly products, which will drive the development of the tetrahydrofuran-3-methylamine industry.
