According to our (Global Info Research) latest study, the global Thermal Field System market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

The thermal field system is one of the key components in the crystal production process. Taking the production process of monocrystalline silicon wafers as an example, it includes crystal pulling and slicing, and the crystal pulling process needs to melt the silicon material in a heating environment first, and then go through seeding, necking, shouldering, equal-diameter growth, and finishing. and other steps are made. The thermal field is a consumable in the process, and its components include crucible, guide tube, heat preservation tube, heater, etc.
