Abstracts

According to our (Global Info Research) latest study, the global Thermoplastic Elastomer Type Toughener for Epoxy Resin market size was valued at US\$ 67.3 million in 2024 and is forecast to a readjusted size of USD 107 million by 2031 with a CAGR of 5.9% during review period.

The addition of rubber elastomer greatly improves the toughness of epoxy resin, but at the expense of heat resistance and rigidity. Moreover, for epoxy resin with high cross-linking density, the toughening effect of rubber elastomer is very small. The use of thermoplastic resin and epoxy resin to form a polymer alloy for toughening and modification makes up for the shortcomings of rubber elastomer modified epoxy resin. Thermoplastic resins commonly used to toughen epoxy resins include polysulfone, polyimide, polyphenylene ether, liquid crystal polymer and other varieties.
