Abstracts

According to our (Global Info Research) latest study, the global Three Mouth Flask market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Three Mouth Flask is a commonly used chemical glass instrument and is widely used in organic chemistry experiments. A three necked flask usually has a round belly and thin neck appearance. It has three ports and can simultaneously add multiple reactants or add condensation tubes. Its narrow mouth is used to prevent solution splashing or reduce solution evaporation, and can be used in conjunction with rubber stoppers to connect other glass equipment. When the solution requires a prolonged reaction or heating reflux, a flask is generally chosen as the container. The opening of the flask does not have a protruding gap like a beaker, making it easier for the solution to flow down the outer wall when pouring. Therefore, a glass rod is usually used to gently touch the bottle mouth to prevent the solution from flowing down the outer wall. The flask is not suitable for stirring with a glass rod due to its narrow mouth. If stirring is needed, you can hold the bottle mouth slightly and turn your wrist to mix evenly, or use a dedicated mixer. If heated and refluxed, a magnetic stirrer can be placed in the bottle to heat the stirrer and stir.
