According to our (Global Info Research) latest study, the global Three-Stage Vacuum Glue Filling Machine market size was valued at US\$ 148 million in 2024 and is forecast to a readjusted size of USD 212 million by 2031 with a CAGR of 4.8% during review period.

The Three-Stage Vacuum Dispensing Machine is a device used for precise dispensing of adhesives, and is commonly used in the production process of the electronics, optoelectronics, communications and other industries. It accurately dispenses glue, resin or other liquid materials into the housing or joints of electronic components, LED lamps, sensors, optical components, etc. through vacuum and pressure control to ensure their sealing, waterproof, shock resistance and other functions. The 'three-stage' of the three-stage vacuum dispensing machine refers to its three different stages in the dispensing process: vacuum evacuation stage, dispensing stage and pressurized curing stage. Through these three stages, it can be ensured that the glue fills the target area evenly and without bubbles during the dispensing process, and no bubbles or pores are formed in the material.
