## Abstracts

According to our latest research, the global Thromboresistant Coatings market size will reach USD 2092 million in 2031, growing at a CAGR of 6.2% over the analysis period.

Thromboresistant coatings are specialized surface treatments applied to medical devices and implants, such as stents, catheters, and vascular grafts, to reduce the risk of blood clot formation. These coatings are designed to mimic the natural anti-thrombogenic properties of blood vessels, minimizing platelet adhesion and activation. Commonly made from biocompatible materials like heparin, hydrogels, or synthetic polymers, they enhance the safety and effectiveness of devices used in cardiovascular and other blood-contact applications. By preventing thrombosis, these coatings improve patient outcomes and extend the functionality of medical devices.
