According to our latest research, the global TIG Welding Services market size will reach USD million in 2031, growing at a CAGR of %over the analysis period.

TIG, or Tungsten Inert Gas (also known as GTAW - Gas Tungsten Arc Welding), is an arc welding process that uses a non-consumable tungsten electrode and an inert gas (typically argon or helium) to create a clean weld. The intense heat generated by the arc melts the base metals to form the weld joint. TIG welding offers precise control over the weld pool, making it ideal for thin materials and applications requiring a high-quality finish.
