Time Delay Timer, also known simply as a delay timer, is an electronic or electromechanical device designed to introduce a delay between an input signal or trigger event and an output action or response. It's commonly used in various applications where a specific time delay is needed before initiating a subsequent action.

The primary function of a Time Delay Timer is to introduce a controlled delay between an input signal and an output response. This delay can be precisely set by the user according to the specific requirements of the application. The timer's mechanism ensures that the output action is initiated only after the predefined time delay has elapsed following the input signal.
