According to our (Global Info Research) latest study, the global Titanium Pipes for Construction market size was valued at US\$ 1784 million in 2024 and is forecast to a readjusted size of USD 2185 million by 2031 with a CAGR of 2.9% during review period.

Titanium has high strength and excellent welding performance, as well as low density and excellent corrosion resistance. The most suitable items and walls for buildings. Ti15333 alloy has high strength and can be used for various supports and building beams. The latest emerging methods and technologies beyond stainless steel are used for cutting, forming, and connecting titanium. Titanium can be connected to components through a universal TIG welding process, and its self-healing oxide film can prevent welding damage. Titanium, as a building material, not only has a natural luster, but can also exhibit different colors through oxidation. In addition, it has excellent corrosion resistance and does not require the application of anti-corrosion film. Due to the low reflectivity and light silver gray color of titanium material, its natural color is satisfactory. After annealing and acid washing, the surface of titanium shines. Adopting the method of anodizing the metal before oxidation and adjusting the natural surface gloss to change the hue to meet customer color requirements.

Japan was the first country to use titanium in buildings and also the country that uses titanium the most in buildings. It is mainly used for the roof items of buildings, followed by curtain walls, port facilities, bridges, underwater tunnels, exterior walls and decorations, small accessories, pillar decorations, exterior wall decorations, monuments, signs, door panels, railings, pipelines, anti-corrosion coatings, etc. There are building examples in the UK, France, the US, Spain, the Netherlands, Canada, Belgium, and Switzerland that use titanium metal for roofs and curtain walls. Sweden,

Singapore, and Egypt have started using titanium in some new buildings. In 1997, the Guggenheim Museum in Bilbao, Spain used titanium plates to construct curved surfaces. Abu Dhabi Airport has also chosen titanium, with a quantity of nearly 100 tons. This airport is the world's first airport to use titanium as a building structural material.
