As a medical implant material widely used in neurosurgery, skull titanium plate has unique definitions and characteristics. Skull titanium plate refers to a medical implant made of titanium or titanium alloy for skull defect repair and fixation. It is usually designed to match the shape of the skull surface so that it can accurately cover and fix to the skull defect area during surgery, thereby restoring the integrity of the cranial cavity and protecting brain tissue. Skull titanium plates are mainly used to repair skull defects in neurosurgery. These defects may be caused by trauma, surgery (such as after brain tumor resection) or disease (such as skull osteomyelitis). By implanting skull titanium plates, the integrity of the cranial cavity can be restored, brain tissue can be protected, the appearance can be improved, and complications caused by skull defects can be reduced.

As an important part of high-value medical consumables for neurosurgery, the skull titanium plate market is mainly used for skull defect repair and fixation in neurosurgery and is an indispensable and important material in neurosurgery. With the continuous advancement of neurosurgery technology and the increase in the number of surgeries, the market demand for skull titanium plates is also growing continuously. With the

continuous development of medical technology, skull titanium plate materials and technologies are also constantly innovating. For example, new skull titanium plate materials have the advantages of better biocompatibility, higher strength and lower infection rate, which can meet the needs of different patients. At the same time, the application of advanced technologies such as digital technology and 3D printing technology also provides more possibilities for the production and customization of skull titanium plates, further promoting the development of the market. In summary, the skull titanium plate market shows a steady growth trend worldwide, and in the future, the skull titanium plate market will continue to maintain a good development trend.
