According to our (Global Info Research) latest study, the global Transcranial Magnetic Stimulation (TMS) System market size was valued at US\$ 1578 million in 2024 and is forecast to a readjusted size of USD 2909 million by 2031 with a CAGR of 9.8% during review period.

The transcranial magnetic stimulation (TMS) system is a non-invasive neuromodulation technology that uses pulsed magnetic fields to act on the central nervous system and regulate the activity of neurons in the cerebral cortex through induced currents. The TMS system transmits a rapidly changing magnetic field through a coil placed on the scalp. This magnetic field can penetrate the skull and enter the cerebral cortex, thereby generating induced currents in the cerebral cortex. These induced currents can stimulate neurons in the cerebral cortex, change their excitability, and thus affect brain function.
