TRIS, or tris(hydroxymethyl)aminomethane, has another alias, tromethamine, which is an amino buffer base without sodium. It reacts with H_2CO_3 in body fluids to reduce H_2CO_3 and generate HCO_3^{2-} , which can absorb hydrogen ions and correct acidemia. It has a strong effect and can pass through cell membranes. It is often used for acute metabolic and respiratory acidemia. As an alkaline drug, it is used to correct acidosis and will not cause increased carbon dioxide retention. Because it is used in pharmaceuticals, the entire production raw material source, production process route, product purity, and impurity ion content of Tris are strictly required. The purchase of this type of product must be very strict and cautious, and must be strictly tested.
