Twin-screw continuous pulping machine is a kind of equipment used in the pulp production process. Through the rotation of the twin screws, the raw materials (such as waste paper, wood pulp, etc.) are mixed with water and stirred evenly to achieve efficient and continuous pulping effect. This equipment adopts the principle of twin screw extrusion, shearing and stirring, and can convert the raw materials into uniform pulp in a short time. It has the characteristics of high efficiency, energy saving and environmental protection. Twin-screw continuous pulping machine is widely used in paper product production, waste paper recycling and recycled pulp production industries, which can improve production efficiency and reduce energy consumption.
