## Abstracts

According to our (Global Info Research) latest study, the global Ultra-High Refractive Index Optical Glass market size was valued at US\$ 528 million in 2024 and is forecast to a readjusted size of USD 808 million by 2031 with a CAGR of 6.3% during review period.

Ultra-high refractive index optical glass refers to an optical material with a higher refractive index than ordinary optical glass. Its refractive index is usually greater than 1.9, and can even reach 2.3 or higher. It has excellent optical properties, such as high transparency, low dispersion and strong optical focusing ability, and is widely used in high-precision optical systems, such as camera lenses, microscopes, projectors, laser equipment, etc. Due to its high refractive index, it can effectively reduce the size of the optical system and improve the imaging quality. It is an indispensable core material in modern high-end optical technology.
