## Abstracts

According to our (Global Info Research) latest study, the global Ultrasonic Corrosion Mapping System market size was valued at US\$ 587 million in 2025 and is forecast to a readjusted size of US\$ 1158 million by 2032 with a CAGR of 10.2% during review period.

Ultrasonic corrosion mapping systems are non-destructive testing systems based on ultrasonic testing principles. They perform high-precision scanning, imaging, and quantitative assessment of corrosion, thinning, and defects on the interior and surface of metal structures. They can generate two-dimensional or three-dimensional corrosion distribution maps for equipment lifecycle safety management and are widely used in petrochemical, power, shipbuilding, offshore platforms, pressure vessels, and long-distance pipelines. Upstream raw materials and core components mainly include ultrasonic transducers, probe arrays, precision electronic components, data acquisition modules, industrial computers, structural components, and software algorithms. Downstream suppliers are primarily oil and gas operators, chemical plants, power plants, classification societies, and third-party testing service organizations. Future development lies in upgrading towards phased array technology, automated crawling robot integration, AI defect identification, and cloud data management. Against the backdrop of aging global industrial facilities, increasingly stringent safety regulations, and rising demand for predictive maintenance, the market demand for ultrasonic corrosion mapping systems continues to grow, possessing high technological barriers and long-term stable business opportunities.
