Abstracts

According to our (Global Info Research) latest study, the global Ultrasonic Metal Tube Sealing Welder for Cooling Systems market size was valued at US\$ 29.61 million in 2025 and is forecast to a readjusted size of US\$ 40.38 million by 2032 with a CAGR of 4.5% during review period.

An ultrasonic metal tube sealing welder for cooling systems is a solid-state ultrasonic station (typically around 20 kHz) that applies vibration plus clamping force to crimp, hermetically seal, and cut charged copper or aluminum tubes used as refrigerant charging stubs (and similar small tubes such as capillary/bulb sensor tubes) in refrigerators and air conditioners. The process is fast (often under one second per seal) and is designed to be integrated into automated production lines, avoiding flame-based brazing for the sealing step.

Upstream bill-of-materials centers on the ultrasonic generator, piezo transducer, booster/sonotrode tooling, anvil/fixtures, pneumatic or servo force application, and control/safety interlocks (often with hazardous-area considerations). Midstream OEMs and line integrators package the seal-and-cut head with positioning/feeding and takt synchronization with charging/leak testing to deliver semi-automatic stations or fully automated cells. Downstream demand comes mainly from refrigerator and AC/heat-pump manufacturing and component plants.

In 2025, global ultrasonic metal tube sealing welder for cooling systems production reached approximately 2,000 units, with an average global market price is between \$5k and \$35k per unit.
