Abstracts

'ABPM measures blood pressure at regular intervals (every 15-30 minutes is typical) throughout the day and night. It is especially useful for patients in the following groups:
? To evaluate suspected white-coat hypertension in patients with hypertension and no target organ damage.

? Apparent drug resistant hypertension

? Hypotensive symptoms with antihypertensive medications

? Episodic hypertension

? Autonomic dysfunction

Because blood pressure is monitored during sleep, ABPM is useful to determine whether the blood pressure falls at night compared to daytime values. A night time fall is normal. Absence of a night time dip is associated with increased cardiovascular disease risk and other endorgan damage'
