## Abstracts

Emergency lighting is lighting for an emergency situation when the main power supply is cut and any normal illumination fails. The loss of mains electricity could be the result of a fire or a power cut and the normal lighting supplies fail. This may lead to sudden darkness and a possible danger to the occupants, either through physical danger or panic. In the unfortunate event of an emergency or power outage, battery-powered emergency lights automatically turn on, illuminate large areas, and make it much easier for people to find their way to safety. Newer backup lights can run for several hours before the battery runs down, which make them quite useful for homes and businesses that experience frequent or prolonged power outages.
