Abstracts

Epinephrine, also known as adrenalin or adrenaline, is a hormone, neurotransmitter and medication. Epinephrine is normally produced by both the adrenal glands and certain neurons. It plays an important role in the fight-or-flight response by increasing blood flow to muscles, output of the heart, pupil dilation, and blood sugar. It does this by its effects on alpha and beta receptors. It is found in many animals and some one-cell organisms. Jokichi Takamine first isolated epinephrine in 1901.
