A window screen (also known as insect screen, bug screen, fly screen, flyscreen or flywire) is designed to cover the opening of a window. It is usually a mesh made of metal wire, fiberglass, or other synthetic fiber and stretched in a frame of wood or metal. It serves to keep leaves, debris, insects, birds, and other animals from entering a building or a screened structure such as a porch, without blocking fresh air-flow. Some window screen made of steel or Polyester can be used for ETICS, facade and internal wall reinforcement.
