Abstracts

Radial Piston Hydraulic Motors is a type of hydraulic motors. Radial piston motors are used in caterpillar drives of dragline excavators, cranes, winches and ground drilling equipment. Radial piston motors are capable of producing high torques at very low speeds, down to half a revolution per minute. The pistons (or plungers) of a radial piston motor form a star-like shape and are perpendicularly connected to the shaft. The rectilinear motion of the pistons is transformed into a rotating movement by the eccentric shaft.
