## Abstracts

Thermoplastic polyamide elastomers are high-performance thermoplastic elastomer (TPE) block copolymers, based on nylon and polyethers or polyesters. PAEs consist of alternating hard and soft segments joined by amide linkages. They are used mainly in areas where other thermoplastic elastomers cannot compete or perform, especially at lower temperature. Moreover, PAEs can be processed by usual melt-processing techniques, such as injection molding, extrusion, blow molding, rotational molding and thermoforming.
