Abstracts

X-rays are a form of electromagnetic radiation, which have higher energy and can pass through most objects. X-ray machine is a kind of device for generating X-rays. An X-ray machine is composed of a control console which enables the X-Ray technician to select various X-Ray techniques suitable for that specific exam, an X-ray generator that creates and produces the desired KV (kilovoltage), MA (milliamperage sometimes referred to as MAS which is actually MA multiplied by the desired exposure length) and X-ray tube. The heart of an X-ray machine is an electrode pair -- a cathode and an anode -- that sits inside a glass vacuum tube. X-ray machine is widely used in medical and industrial fields
