According to our (Global Info Research) latest study, the global Unmanned Aerial Vehicle Battery market size was valued at US\$ 1411 million in 2023 and is forecast to a readjusted size of USD 2834 million by 2030 with a CAGR of 10.1% during review period.

Drone batteries are the part of the drone power system that stores and releases energy. Most of the power batteries used in drones are lithium polymer batteries. Compared with traditional batteries, lithium polymer batteries have advantages such as light weight and high discharge rate. As the main power source for drones, lithium batteries affect the range and flight time of drones.

As the cost of developing and producing drones continues to decrease, their application scope is becoming increasingly wide, with strong market demand and broad development prospects. The market size will continue to maintain rapid growth in the future. In particular, the rise of the civil drone market has driven the growth in demand for drone lithium batteries. With the further maturity of the market and the continuous development of lithium battery technology, civil drone lithium batteries will become a highlight that promotes the rapid growth of the consumer lithium battery market.

In recent years, the drone industry has received high attention from governments at all levels and key support from national industrial policies. The country has successively introduced a number of policies to provide a clear and broad market prospect for the development of the civil drone industry, provide a good production and operation environment for enterprises, and further accelerate the development of the civil drone lithium battery market.
