Abstracts

According to our (Global Info Research) latest study, the global Urokinase Solution market size was valued at US\$ 7.60 million in 2025 and is forecast to a readjusted size of US\$ 10.74 million by 2032 with a CAGR of 5.0% during review period.

Urokinase Solution is a clot-dissolving medicine. It is a natural enzyme (a protein) that activates the body's own fibrinolytic system by converting plasminogen into plasmin, and plasmin then breaks down fibrin, which is the "mesh" that holds a blood clot together. This is why urokinase is called a thrombolytic or "clot-buster." The market for urokinase mainly includes injectable products (usually a sterile powder that is dissolved before use) that are given in hospitals, either through a vein or through a catheter directly to the clot area, depending on the indication and local practice. The clinical risk that shapes this market is also simple: because the drug dissolves clots, it can also weaken normal clotting at injury sites, so bleeding is the key safety concern and a major reason urokinase is used in controlled hospital settings.

In 2025, global Urokinase Solution production reached approximately 254.8 BIU, with an average global market price of around US\$ 29 per MIU. The global single-line production capacity ranges from 10 to 15 BIU per year. The industry's gross profit margin is approximately 25%-35%.
