Abstracts

According to our (Global Info Research) latest study, the global UV Coated Fiber Cement Board market size was valued at US\$ 516 million in 2024 and is forecast to a readjusted size of USD 651 million by 2031 with a CAGR of 3.4% during review period.

UV Coated Fiber Cement Board is processed by special craft using LCFC (low contraction fiber cement) as substrates and Resin/UV as surface material, the new materials replaced the traditional wall panels. The boards are steamed and compressed to be different thicknesses with high density.

According to the Japan Cement Association, Japan's cement industry emitted about 40 million tons of carbon dioxide in 2020. And the cement industry became the fourth largest source of carbon dioxide emissions in the industrial sector after electricity, steel and chemicals. 60% of the cement industry's carbon emissions come from process emissions, 35% from combustion emissions and 5% from indirect emissions from electricity. According to our ?Building Materials Research Institute?, the global clinker capacity in 2022 was about 3.55 billion tons, and the global cement production was about 4.0 billion tons. According to the National Bureau of Statistics, China's cumulative cement output reached 2.118 billion tons in 2022. UV-coated fiber cement board is an advanced building material commonly used in applications such as interior and exterior trim and building walls. It combines the advantages of fiber cement board with the advantages of UV coating technology, providing better waterproof, antifouling, weather resistance and decorative performance. Fiber cement board is made of cement, fiber and other auxiliary materials. It has the advantages of fire resistance, corrosion resistance and earthquake resistance, which makes it have a good application prospect in building walls and interior decoration. UV coating technology is an advanced surface treatment technology that cures and hardens the coating in a short period of time

through ultraviolet radiation. It provides excellent waterproof, weather resistance and wear resistance, and also makes the fiber cement board have a better decorative effect.
