According to our (Global Info Research) latest study, the global UVC Air Disinfection Device market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

UVC air disinfection device is a device that uses UVC (short-wave ultraviolet light, wavelength between 200-275nm, commonly used wavelength is 253.7nm) to disinfect the air. Because the UVC band has a short wavelength and a single photon has a large energy, it can destroy the DNA or RNA molecular structure of microorganisms, causing them to die or unable to reproduce, achieving the purpose of sterilization and disinfection.
