The valve cracking unit is a high-temperature cracking reaction equipment used in petrochemical industry. It adjusts the fluid flow and pressure in the reactor by controlling the opening and closing of the valve to crack hydrocarbon molecules into smaller molecules, such as ethylene, propylene and other light chemical raw materials. The device can accurately control the reaction conditions, such as temperature, pressure and residence time, so as to improve the efficiency of the cracking process and the selectivity of the product. It is widely used in the fields of oil refining, natural gas processing and chemical synthesis.
