Abstracts

According to our (Global Info Research) latest study, the global Vanadate Laser market size was valued at US\$ 212 million in 2024 and is forecast to a readjusted size of USD 308 million by 2031 with a CAGR of 5.6% during review period.

The term vanadate laser is usually used for lasers based on neodymium-doped vanadate crystals. In particular, these include yttrium vanadate (Nd:YVO₄), gadolinium vanadate (Nd:GdVO₄), and lutetium vanadate (Nd:LuVO₄). These vanadates are also called orthovanadates. Such materials have been known for a long time, but became popular only many years later, because for a long period it was difficult to grow them with high optical quality in sufficiently large sizes. Apart from progress in crystal growth, the advent of diode pumping increased the interest in vanadates also because much smaller crystals could be used, while lamp-pumped lasers usually require rather long laser rods.

According to our research, the global Electronic Components market is approximately USD 466.61 billion in 2022. The Asia-Pacific region is a major market for electronic components. The downstream application fields of the electronic components industry are extensive, including communication equipment, consumer electronics, automotive electronics, smart home, industrial control, military security and other fields. Unlike the strong industry demand in 2021, downstream industry demand in 2022 showed a differentiated trend. The demand for traditional electronic applications represented by mobile phones and computers has turned weak, which has a greater impact on the demand of the entire industry; the demand for communication equipment and data centers has maintained growth but slowed down, and the industrial and Internet of Things driven by digital transformation and the development of artificial intelligence technology. The steady growth of application demand and the accelerated development

of the new energy vehicle market can offset the decline in some consumer markets and provide support for long-term demand growth.
