The vascular endothelial function test system is a medical diagnostic device used to evaluate the functional status of vascular endothelial cells. Vascular endothelium is a single-cell layer of the inner wall of blood vessels that plays a key role in regulating vascular tone, blood flow, platelet aggregation, inflammation, and coagulation. Endothelial dysfunction is considered to be one of the early markers of cardiovascular disease development, and therefore, assessing vascular endothelial function is critical for early identification of cardiovascular risk factors and disease management.

This report is a detailed and comprehensive analysis for global Vascular Endothelial Function System market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application.
