According to our (Global Info Research) latest study, the global Very High Flexion Tractor Tyre (VF Tractor Tyre) market size was valued at US\$ 1739 million in 2025 and is forecast to a readjusted size of US\$ 2582 million by 2032 with a CAGR of 5.9% during review period.

The core feature of very high flexion (VF) tractor tyre is the increased contact patch through significantly enhanced tire deformation, thereby reducing soil compaction, improving traction, and reducing fuel consumption. It is an agricultural tire employing special structural and material technologies, with a sidewall design exhibiting extremely high flexibility. Compared to standard tires, it can increase load by approximately 40% at the same tire pressure, or reduce tire pressure by approximately 40% at the same load. This is primarily driven by modern agriculture's pursuit of sustainable and intensive development: upstream, large agricultural machinery is continuously increasing power and weight to improve efficiency, leading to increasingly serious soil compaction problems that threaten arable land health and long-term yields; downstream, farmers and agricultural operators urgently need a solution that can protect the soil while supporting heavy agricultural machinery. Its supply chain involves upstream innovative suppliers of specialty synthetic rubber, high-strength steel cord, and flexible tire carcass materials, as well as specialized tire mold and intelligent manufacturing equipment manufacturers; downstream, it closely connects with agricultural machinery manufacturers for complete vehicle assembly, and covers end-farms through agricultural machinery dealers and professional service centers, relying on central tire pressure control system suppliers to achieve optimal tire performance. The entire supply chain responds to the core market demands of reducing soil compaction, improving operational efficiency, and reducing fuel consumption, driving the upgrading

of agricultural tires towards high technology and high added value. By 2025, the production of ultra-high flexibility (VF) tractor tires is expected to reach approximately 1.3 million units, with an average selling price of approximately US\$1,300 per tire, a gross profit margin of approximately 30%, and a single production line capacity of approximately 20,000 units per year.
