Abstracts

According to our (Global Info Research) latest study, the global Vibratory Pile Hammers market size was valued at US\$ 357 million in 2024 and is forecast to a readjusted size of USD 544 million by 2031 with a CAGR of 6.2% during review period.

A 'vibratory pile hammer' is a tool used to drive piles in or out of the ground for building marine docks, bridges, buildings, roads, rail, walls, and many other types of foundations. Traditional pile drivers are very loud and use a large weight to strike the pile. Vibratory hammers however are very quiet and have many advantages. A few advantages of vibratory hammers are that they can drive piles much more quickly, extract old piles out of the ground, can be used underwater, are light weight, protect the environment (especially animal life), can be used in close proximity to residential areas without noise complaints, and are small and easy to ship.

The Vibratory Pile Hammers market has been experiencing continual growth for the past several years. The Asia Pacific is expected to be the fastest-growing market over the forecast period owing to extensive usage in the construction field. This can primarily be attributed to the considerable Chinese market, which contributes significantly to global volume as well as revenue generation. For the Vibratory Pile Hammers industry, the market is low concentrated. ThyssenKrupp. American Piledriving, Equipment (APE), PTC (Fayat Group) and Dieseko are the leader companies globally. The 16 top players listed accounted for over 54% of the market. In the future, the growth rate of Vibratory Pile Hammers industry may not keep that fast. But it is surely forecasted that the market of Vibratory Pile Hammers is still promising. On the basis of product type, Hydraulic Vibratory Pile Hammers type segment is projected to account for the largest consumption value market share during the forecast period; this segment was estimated

to account for 75% share in 2019 in terms of consumption value.
