According to our (Global Info Research) latest study, the global Video Electroencephalography (EEG) Monitoring market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Video Electroencephalography (EEG) monitoring is a combination of EEG and camera system, and digital video EEG (VEEG) has emerged. That is, while doing EEG, video is recorded, and the EEG and video images at each moment are matched one by one through software. While watching the EEG, you can watch the synchronous video of the patient's attack. Based on digital video recording and playback technology, the patient's every move during the monitoring process is marked in the video image with red, blue, green and other colors, which is more conducive to capturing every abnormal behavior and action. Through video action trend analysis, you can clearly understand the degree and duration of the patient's actions in each period. Greatly improve the diagnosis rate of the disease and work efficiency.
