## Abstracts

According to our (Global Info Research) latest study, the global Water-Based Curing Compounds market size was valued at US\$ 1343 million in 2024 and is forecast to a readjusted size of USD 2171 million by 2031 with a CAGR of 6.0% during review period.

Water-based curing compounds are products applied to freshly poured concrete to retain moisture and regulate the curing process. Proper curing is essential to ensure that the concrete gains the necessary strength and durability. Water-based curing compounds form a thin, protective film over the concrete surface, reducing moisture loss due to evaporation, which is especially important in hot, windy, or dry conditions.
