According to our (Global Info Research) latest study, the global Water Treatment Softening Chemicals market size was valued at US\$ 1602 million in 2024 and is forecast to a readjusted size of USD 2270 million by 2031 with a CAGR of 5.0% during review period.

Water treatment softening chemicals are used to reduce water hardness caused by high concentrations of calcium and magnesium ions, which can lead to scaling, equipment damage, and inefficiencies in industrial and domestic systems. Common softening chemicals include sodium carbonate (soda ash) and sodium hydroxide, which precipitate hardness ions, and chelating agents like ethylenediaminetetraacetic acid (EDTA) to bind calcium and magnesium ions. In ion-exchange systems, sodium chloride (salt) is used to regenerate resin beads that remove hardness ions from water. These chemicals are essential in applications such as boiler feedwater treatment, cooling systems, and residential water softeners, ensuring improved efficiency, reduced maintenance, and extended equipment lifespan.
