Abstracts

According to our latest research, the global Watertight Concrete System market size will reach USD million in 2031, growing at a CAGR of %over the analysis period.

Waterproof concrete is an impermeable concrete used for long-lasting, durable watertight construction. To improve the impermeability of the concrete, water-resisting admixtures can be added. Nevertheless, design and construction of a watertight concrete structure is a system approach, and waterproof concrete is only one element of it. Water impermeability is determined by fulfilling requirements to limit water permeability through the concrete itself, the joints, installation parts and cracks.

Watertight Concrete System is not a single product provided by a specific manufacturer, but a building technology and construction method. Several companies and suppliers play an important role in providing relevant materials, technologies and solutions.
