## Abstracts

According to our (Global Info Research) latest study, the global Wearable Thermal Imagers market size was valued at US\$ 480 million in 2025 and is forecast to a readjusted size of US\$ 1217 million by 2032 with a CAGR of 14.2% during review period.

In 2025, global Wearable Thermal Imagers production reached approximately 0.2 million units, with an average global market price of around US\$ 2500 per unit. Monthly production capacity is 1000 per line. Wearable Thermal Imagers are portable infrared imaging devices designed to be worn on the body (e.g., on helmets, vests, or mounted on wearable rigs) that capture and display thermal (heat) images in real time. The wearable thermal imager industry chain starts with infrared sensor and detector manufacturers, continues through thermal module and electronics assembly, then integrates these modules into wearable housings with displays and connectivity, and ends with distribution to industrial, firefighting, defense, and medical end users. Wearable thermal imagers are rapidly becoming essential tools for hands-free situational awareness across multiple sectors. Their value lies not only in real-time thermal imaging but also in enabling safer, more efficient operations—from detecting electrical faults in industrial plants to locating victims in smoke-filled environments.
