Abstracts

According to our (Global Info Research) latest study, the global Wind Power Drone Inspection Service market size was valued at US\$ 1053 million in 2025 and is forecast to a readjusted size of US\$ 3543 million by 2032 with a CAGR of 18.9% during review period.

Wind power drone inspection service refers to the use of commercial industrial-grade drones equipped with sensors such as visible light, infrared, and lidar to conduct fully automated aerial inspections of blades, towers, nacelles, foundations, and power collection lines while the wind turbine is in operation. It collects real-time data on defects such as cracks, corrosion, loose bolts, and thermal anomalies. Cloud-based AI automatically generates defect reports and maintenance work orders, providing wind farms with 'non-stop + high-precision' intelligent operation and maintenance outsourcing services.

In 2025, the gross profit margin of wind power drone inspection services was 30%–38%, slightly higher than photovoltaic but lower than grid-connected services. This is mainly due to the complex operating environment of offshore wind power, the high technical threshold of non-stop blade operation, and customers' sensitivity to power generation losses, resulting in limited price premiums.
